**Erik Smith** is a Distinguished Engineer (DE) working for Dell's Integrated Products and Solutions CTIO team. Erik is currently focused on next generation Storage Networks and the creation of centralized storage services for NVMe-oF™. Previously, Erik led Engineering and Advanced development for Dell's Connectrix Business unit, and was responsible for working with Dell's partners to address architectural problems and collaborate on new features.

**Curtis Ballard** is a Distinguished Technologist with Hewlett Packard Enterprise in the HPE Storage organization. He works on emerging storage technologies and industry engagement. Curtis is on the NVM Express Board of Directors, the SNIA Technical Council, and is the vice-chair of the INCITS/T10 SCSI Storage Interfaces Technical Committee. Curtis has worked on storage products across the industry including host drivers, interface ASICS, standalone drives, and complex storage systems.
